

Light Track Cranes

Free standing Light Track Cranes

Cranes are suspended from support frame structures that do not rely on the building for structural support. Independent structural support allows for the crane to be moved or modified, ideal for companies with a broad range of projects or future changes.

Ceiling Suspended Light Track Cranes

Cranes are easy to install and allow for additional workspace by removing the need for structural support columns. Ceiling suspended cranes are ideal for assembly line applications and other applications requiring the transport of materials.

Features

- Light track cranes are available in aluminum and steel
- Systems are a modular design, with a bolt-together format that requires no field welding
- Crane systems are supplied in both an underhung and top-riding design for added flexibility
- All cranes are available with thermal-bonded epoxy for use in both clean room and corrosive environments
- Crane systems are built to meet SEMI S2 and Seismic 4 requirements
- Cranes are certified for Class 10 clean room environments
